EDUCATION

Gujarat Technological University *May 2026*
Bachelor of Technology in Computer Engineering CPI: 9.10

The Radiant International School, Surat *2022*
Board of Higher Secondary Education - GSEB Percentage: 90.78

Experience

AI/ML Intern — Canopas,Gujarat *Jan'26 - Jun'26*

- I completed my 6-month internship at Canopas as an AI/ML Engineer Intern, working on live, practical projects. During this internship, I worked AI and automation solutions by applying machine learning concepts and software development practices. I gained hands-on experience with Python, ML Models, Flask, OpenCV, PyAutoGUI, FASTAPI, Django, Deep Learning frameworks, SQL and Docker, AI Agent and Workflow applying my knowledge to real applications and solving practical, production-level problems.

Gen AI Development Intern — Code4x (Remote) *Dec'25 - March'26*

- During my internship, I worked extensively on building intelligent AI-driven solutions by leveraging modern technologies such as Large Language Models and Retrieval-Augmented Generation to develop context-aware applications. I gained hands-on experience in designing and implementing AI workflows using LangChain and explored automation of AI pipelines with n8n.
- This experience strengthened my understanding of applied Artificial Intelligence, including concepts like semantic search, prompt engineering, and agent-based systems, enabling me to develop scalable and efficient AI-powered solutions.

PROJECTS

Company Policy Question and Answer Bot Preview *2026*
Technologies Used : Python, Streamlit, LangChain, FAISS, Ollama, RAG(Retrieval-Augmented Generation), Vector Embeddings

- My project Company Policy Q and A Bot, an AI-powered application that allows users to upload policy documents and ask questions efficiently. The project is built using Python and Streamlit, leveraging LangChain for document processing and implementing a Retrieval-Augmented Generation (RAG) approach. FAISS is used for fast and accurate vector-based retrieval, while a local Large Language Model (LLM) generates context-aware answers based on the retrieved information.
- This project enhanced my understanding of modern NLP pipelines and practical LLM applications.

AUTODS – Autonomous Data Scientist Preview *2026*
Technologies Used : Flask, pandas, NumPy, scikit-learn, XGBoost, Chart.js, HTML, CSS, and JavaScript

- I have developed an end-to-end AutoML web application using Flask, Pandas, Scikit-learn, and XGBoost that automates data cleaning, exploratory data analysis, feature selection, model training, evaluation, and real-time predictions. The application compares multiple machine learning models using cross-validation, provides interpretable performance insights, and features an interactive dashboard with visualizations and export options, enabling users to build and evaluate predictive models without requiring API keys or external AI services.

FaceID - Face Recognition Attendance System *2026*
Technologies used : Python, Flask, OpenCV, CSV Data Management, Docker

- I have developed a comprehensive Face Recognition Attendance System that automates student attendance tracking using computer vision and facial recognition technologies. Implemented face detection and

recognition using OpenCV, enabling users to register student profiles, train recognition models, and mark attendance in real time through webcam integration. The system securely stores student data, generates attendance records automatically, and minimizes manual intervention, improving accuracy and efficiency in attendance management.

- I enhanced the application with a responsive Flask-based web interface, password-protected administrative controls, automated attendance report generation, and email sharing functionality.

NeuraDocs - Intelligent Document Assistant Preview *2026*

Technologies used : Python, Flask, PyPDF2, NLP, ReportLab

- My project is an AI-powered document interaction platform that enables users to upload PDF documents, extract content, and gain insights through natural language conversations. Integrated Google Gemini API to provide context-aware question answering, allowing users to interact with documents seamlessly and retrieve relevant information instantly. Implemented multi-level document summarization with Concise, Standard, and Detailed modes to accommodate different user requirements and improve information accessibility.
- Enhanced the application with voice-based query interaction, enabling hands-free document exploration through speech input. Added PDF export functionality using ReportLab, allowing users to download AI-generated responses, summaries, and chat histories for future reference.The platform features a responsive and intuitive user interface built with Flask, HTML, CSS, and JavaScript, along with automated file cleanup mechanisms to ensure privacy and efficient resource management.

Technologies

Languages: Python, R(Basic), C, Java, Dart

Databases: MySQL, PostgreSQL, MongoDB

Technologies: Data science, AI/ML, Agentic AI,FastAPI, Flask, Django, TensorFlow, N8n, MYSQL, Firebase

Tools: Git, GitHub, Docker, VS Code, Kubernetes, n8n, Google Colab, Jupyter Notebook, Anaconda, MongoDB compass, Android Studio

Concepts: DSA, OOP, DBMS, Operating Systems, Computer networks

Soft Skills: Communication, Problem solving, Teamwork, Time Management

Achievements & Certifications

- Machine learning and Deep learning - Complete course (Udemy)
- Solved 500+ problems on Leetcode and GFG
- Participated in SIH 2024 - Smart India Hackathon
